

How do I mount my mirrors?

When your unu Scooter arrives, the only thing you have to do is mount the mirrors. Here's a quick guide on how to do it.

Step 1

Push the rubber cap up the metal bar and screw the nut to the top of the thread.

Step 2

Now screw the thread completely into the bracket on the handle bar. Make sure not to use a lot of force, as this would cause the threads to not be aligned correctly. You might need more than one attempt to get it to fit.

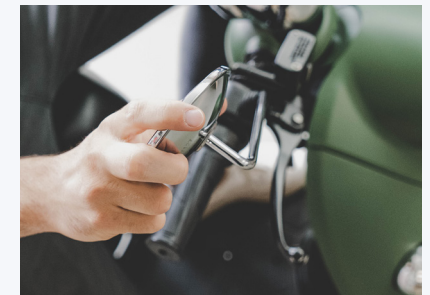

Step 3

Turn back the mirror bar until it is somewhere between throttle and brake lever, seen from an above perspective.

Step 4

Turn back the mirror bar until it points between throttle and brake lever, seen from an above perspective.

Step 5

Now you can adjust the upper part of the mirrors to give you a good view of the traffic behind you.
